

Simplify
PC management.

Amplify
productivity.

Top 10 benefits of Windows Intune.

Remote workers in multiple locations. Multiple PC configurations. Limited resources. These are just a few of the challenges that face businesses just like yours every day. Windows Intune™ not only helps you address these challenges, it takes PC management to a whole new level of simplicity. With its powerful combination of Windows® cloud services and Windows 7, Windows Intune offers a comprehensive solution to help keep your PCs and employees operating at peak performance.

1 Help manage and secure your PCs from anywhere.

The Windows Intune cloud service helps keep your employees productive in the office or on the road—all that's required is an Internet connection. Through a simple web-based console, your IT staff can provide remote assistance from virtually anywhere, centrally manage updates, and proactively help protect PCs from malware threats, so your employees can stay focused on the business.

2 Get the best Windows experience.

Standardizing your PC environment provides a better experience for your workforce and an easier environment for you to manage. You can upgrade to Windows 7 Enterprise operating system or run a prior release—it's your choice. With its intuitive interface and advanced search capabilities, plus BitLocker® drive encryption to better protect confidential data, Windows 7 Enterprise gives your employees the best Windows experience available. As long as your subscription remains active, you'll also get upgrade rights to the latest operating system, so you won't need to worry about buying upgrade licenses when the time comes.

3 Achieve big-tech results with a small-tech investment.

Designed to fit businesses without PC management and security infrastructure, Windows Intune is an all-in-one solution that includes PC management, malware protection, and Windows upgrades rolled into one easy purchase. With minimal overhead, simple billing, and no formal training required, it's easy to get started and maintain.

4 Stop malware threats before they stop you.

Windows Intune gives you powerful, centralized protection to help keep your PCs safe from the latest security threats. Built on the Microsoft® Malware Protection Engine and using the same trusted technologies as Microsoft Forefront® Endpoint Protection and Microsoft Security Essentials, you get real-time protection with reporting and alerts to help safeguard PCs against dynamic forms of malicious software, including spyware, viruses, and root kits.

“Windows Intune gives us insights that help us be more proactive in our PC management so that we can keep our employees and their PCs running at their best. It makes everyone more productive.”

—Geoff Cummins,
IT professional,
Sno Falls Credit Union

5 Keep your PCs up-to-date.

Centrally manage the deployment of Microsoft updates and service packs to all managed PCs. Through the web-based console, you can select which updates you want to deploy across your PCs to help keep them running smoothly.

6 Identify issues before they impact business.

Windows Intune makes it simpler for you to proactively monitor your PCs, sending alerts to help you identify potential problems before they negatively impact your employees and your business. With Windows Intune, you can set up security and update alerts that notify you when you've got a threat or if a critical update was unsuccessful—so you can fix it before your PCs become vulnerable.

7 Easily track your assets and manage licenses.

Effective inventory management is key to optimizing existing investments. With Windows Intune, you can easily view and track your organization's hardware and software inventory, so you can efficiently manage your assets, licenses, and compliance.

8 Manage multiple customer accounts from a single view.

If you're a solution provider or an IT consultant using Windows Intune to manage your customers PCs, the Multi-Account Console consolidates all of your customer accounts in a single view to help you stay on top of your customers' needs.

9 Increase your insight with reporting.

Get a snapshot of what's going on in your PC environment, so you can quickly see the status of updates, software, licensing, and more. In just a few simple steps, you can create a report that gives you a full list of all the installed software on your PCs managed by Windows Intune—so you can better analyze specific needs of users in your organization. This data can also be imported into other reporting tools such as Microsoft Office Excel® so you can organize it into a view that's most helpful for you.

10 A cloud you can count on.

Microsoft is a leader in IT infrastructure solutions with the Microsoft System Center family of products, and we used that experience in developing Windows Intune. Windows Intune takes advantage of the Windows Update infrastructure, one of the world's largest cloud services, which delivers updates every month to hundreds of millions of PCs. And with a financially backed 99.9 percent uptime service level agreement, you can have confidence the service will be there when you need it.
