

## Vorsite Search Solutions for Microsoft and Documentum

### Solution Overview

Enterprise Search is about empowering workers to interact with the information they need to get their jobs done. With Microsoft Search you can provide this to your workers or customers in a relatively short timeframe for minimal cost.

Do your customers need to index content from their existing EMC|Documentum or IBM FileNet content sources? Are you the customer? Crawling the enterprise just got easier with the indexing connectors provided by Microsoft. Vorsite is offering a solution that will enable you to get a successful Proof of Concept designed to empower you to quickly index heterogeneous content and instantly demonstrate the value of enterprise search within your organization. This solution utilizes the Microsoft Search Technology and the Microsoft Enterprise Indexing Connectors. By implementing Microsoft Search Server technology, your search proof of concept can be indexing and returning enterprise-relevant results in the same day.<sup>1</sup>

### Solution Benefits

#### Single Easy to use interface to access business content – One Stop Shop

- › One user interface provides users with access to content immediately.  
No longer are multiple applications needed to search multiple sources.

#### Deep Desktop Integration for Increased User Satisfaction

- › User-friendly Microsoft Search interfaces are the window. Whether using SharePoint or Office Applications, user satisfaction stays high as search is incorporated into every-day desktop tools.

#### Increases Efficiency, Reduces Duplication of Effort

- › End users can immediately find the content they need, whether it is required for research, business intelligence, intellectual property management, or fundamental project management. Content can be utilized and improved. Unified search dramatically reduces redundancy and duplication in the content creation process.

### Solution Assumptions

- › During the engagement Vorsite will have access to the appropriate Microsoft Server System Administrators and the Back-End System Administrators.
- › Connectivity and appropriate access accounts to Back-End systems will be available to Vorsite Consultants.
- › The Search environment configured during this engagement is for demonstration purposes only, and will not be used for any other purposes.
- › Work will be conducted remotely unless the customer specifically requests that consultants work on-site.

## About Vorsite

Vorsite is the recognized leader for connecting Microsoft SharePoint Products and Services to enterprise content management systems. Vorsite helps customers ensure that users can access information supporting key business processes quickly and easily while preserving security and data integrity. As a result of this industry experience, Vorsite is uniquely positioned to offer our customers a superior services engagement within an agreeable timeframe. Vorsite has successfully provided services for a number of clients on projects requiring a similar approach, project implementation, and degree of quality. Some key differentiators of Vorsite include:

- › Vorsite is a long term Microsoft Certified Partner and Microsoft Vendor specifically providing SharePoint and Search solutions.
- › Through customer engagements we have developed a set of best practices for deploying SharePoint and Search based solutions.
- › Clear communication and scoping – if we can't do it, you will be the first to know

<sup>1</sup> Typical engagements are to be completed within one to five days depending on the complexity of the environment.

<sup>2</sup> Customer will be responsible for supplying hardware, software, and materials necessary for the POC. This environment is to be used for POC purposes only.

<sup>3</sup> These best practices are derived from Vorsite's customer deployment experiences.
